

# THE NEW WAY TO BUY WATER

'Water in a Box' has been created to provide you with high quality water in one of the most environmentally friendly, easy to handle packaging systems available today. No bottles means 80% less plastic when compared to the equivalent volume in plastic bottles. Our goal is reducing our carbon footprint which is better for the environment. Our water comes from one of the deepest, highest quality aquifers in New Zealand. The natural volcanic rock filtering and 1800 years stored underground produces this super soft water with very high silica content, an essential nutrient for good health and wellbeing.
